

***Amendments to the Specification***

Applicants respectfully request that p. 18, lines 18-21 of the specification as filed be amended as follows:

Optionally, the inlet port 208, is integral with the window frame, again, to enable a leak proof system. The manufacture of the framed membrane involves melting upstanding ribs on the frame by ultrasonic welding so as to weld these to the perimeter of the membrane. The framed membrane [[210]] is attached to the device body [[202]] (by the ultrasonic welding which is done with the port/frame/membrane in situ in the device body [[202]]).
